→ identifies the check hybrid entered in both early- and full-season tests to assist in comparing the results.

\* indicates seed tested from lots not commercially available at planting. Hybrids in italics exceed the grain moisture limit for this test.

**FIELD NOTES:** Crop got off to a good start with good emergence and final stand. Yields were a surprise for the dry July and August. Hurricane Ike high winds did lodge the plot. The plot was mistakenly sprayed with Roundup in the spring rush. The yield variability observed is mainly due to hybrid lodging and subsequent poor yields in highly lodged plots.
