**TEST COMMENTS:** *This test location was lost due to inadequate rain this season. Rainfall was 12.3" below normal May through July, less than 2" June through July. Some plants were only 38" tall due to the extreme heat and dryness. Few plants had ears, if present, only a few kernels were observed. By mid-July, many insurance claims were filed and fields mowed off.*

**Bold** yields are significantly above test average. **Italicized** brands exceeded the grain moisture limit for this test. **GC** = grower comparison product,

**ns** = products not significantly different

**2012 IMAGES from Indiana South [ INSO ] from Better Hybrids Location - ELNORA**

**IMAGE COMMENTS:** *These photos were taken July 19 during the peak of high heat and drought stress. Corn plants were quite short (that is an 8' ladder shown) most without ears. The ears shown represent the best of the test, taken from the healthiest plant "island". Most plants did not have ears or only cobs with a few kernels.*
