TEST COMMENTS: *This site was planted a bit later than normal due to wet spring conditions in the area. The tests looked great through mid to late June when the heat and drought set in. Pollination was poor resulting in many barren stalks and ears. Harvest was attempted but grain quantities were too small for moisture readings. Since data quality was so poor, the site was abandoned.* Lat: 40.4405, Long: -83.82827

Yield & Income Factors: Base Moisture = 15.0% Shrink = 1.3 Drying = \$0.025 Price = \$7.40

 † See last page for Product/Brand, Technology and Seed Treatment information.
 → Identifies the check brand included in early- and full-season tests. **Bold** yields are significantly above test average. **Italicized** brands exceed the grain moisture limit for this test. **GC** = grower comparison product, **ns** = not significantly different
