TEST COMMENTS: *With this spring, conditions were tough for emergence and perfect for stand loss. Plant height ranged from 34 to 44 inches tall. Ponding shortened the crop and set back development. A light infestation of white mold on plant tops and bean leaf beetle feeding were noted. Seed count ranged from 0 to 3 beans per pod, and bean size was variable. Some stems were still green at harvest.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
