TEST COMMENTS: Planting conditions were not ideal. Rainfall caused mulitple ponds and lost strips (plots) in this test. Several products had only 1 replication to measure yield. Individual product results are not shown due loss of replications. Test averages and statistical values (shown) indicate the level of variability here. Yields were excellent in areas without ponding and average "field" yield was above normal.

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
