This was a nice uniform location that received good growing conditions for most of the season. Plant heights were shorter, stems were small and slender, standing really good making harvest fairly easy. Seed size was smaller than average and pod counts were not as high as other locations. There was evidence that sudden death syndrome (SDS) had affected some of the varieties.

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
