TEST COMMENTS: *The site was planted into very good conditions and had excellent emergence. Unfortunately, the test was sprayed with a postemergence herbicide application that contained dicamba that killed all the non-Xtend soybean varieties. Since the plots without soybean plants would give adjacent soybean plots a yield advantage, the tests yield results became compromised. Test was abandoned.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
