TEST COMMENTS: *This site is a very uniform sandy loam location that is well drained and non irrigated. Overall, yields were lower than normal due to inadequate August rains and a well drained soil. All plots were defoliated and no green stems were present in plot. Lodging was not an issue at this location as plant height was below average. No weeds or disease present in plot.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
