**TEST COMMENTS:** *Wet spring weather in early May delayed area soybean planting dates. Following planting, it turned dry, especially late June through first couple weeks of August. During the season, 3.1" rain came during vegetative stages, 1.5" from bloom to full pod and 10.3" from beginning seed to maturity. While pods per node were reduced from drought, large seed size compensated and bumped yields.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
