TEST COMMENTS: *This was a nice uniform location. Some varieties struggled to emerge from the get go, but really evened out as the year went on. There was some sudden death syndrome sprinkled throughout the plot, causing some of the varieties to die prematurely. At harvest, plants were standing well with little lodging at all. Seed size was fairly large, but they did receive a rain three days prior to harvest.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
