TEST COMMENTS: *Plants at this test site stood well until a late November storm with freezing rain resulted in significant ice accumulation on plants. This extra weight and strong winds caused plants to break at the soil surface. Harvest was attempted but these broken plants could not be gathered by the combine resulting in highly variable yields and poor quality data. Harvest was abandoned.*

† See last page for abbreviation descriptions. Results in **bold** are significantly above test average by LSD (0.10). **ns** = column values not significantly different.
